

DRAPER[®]

AIR CAULKING GUN

30911

UK
CA CE

These instructions accompanying the product are the original instructions. This document is part of the product, keep it for the life of the product passing it on to any subsequent holder of the product. Read all these instructions before assembling, operating or maintaining this product.

This manual has been compiled by Draper Tools describing the purpose for which the product has been designed, and contains all the necessary information to ensure its correct and safe use. By following all the general safety instructions contained in this manual, it will ensure both product and operator safety, together with longer life of the product itself.

All photographs and drawings in this manual are supplied by Draper Tools to help illustrate the operation of the product.

Whilst every effort has been made to ensure the accuracy of information contained in this manual, the Draper Tools policy of continuous improvement determines the right to make modifications without prior warning.

1. TITLE PAGE

1.1 INTRODUCTION:

USER MANUAL FOR: Air Caulking Gun

Stock No: 30911

Part No: DAT-ACG

1.2 REVISIONS:

Date first published July 2020.

Date second published January 2024.

As our user manuals are continually updated, users should make sure that they use the very latest version.

Downloads are available from: <http://drapertools.com/manuals>

3. WARRANTY

3.1 WARRANTY

Draper tools have been carefully tested and inspected before shipment and are guaranteed to be free from defective materials and workmanship.

Should the tool develop a fault, please return the complete tool to your nearest distributor or contact:

Draper Tools Limited, Chandler's Ford, Eastleigh, Hampshire, SO53 1YF. England.

Telephone Sales Desk: +44 (0) 8049 4333 or Product Help Line +44 (0) 23 8049 4344.

A proof of purchase must be provided with the tool.

If upon inspection it is found that the fault occurring is due to defective materials or workmanship, repairs will be carried out free of charge. This warranty period covering parts and labour is 12 months from the date of purchase except where tools are hired out when the warranty period is 90 days from the date of purchase. This warranty does not apply to any consumable parts, any type of battery or normal wear and tear, nor does it cover any damage caused by misuse, careless or unsafe handling, alterations, accidents, or repairs attempted or made by any personnel other than the authorised Draper warranty repair agent.

Note: If the tool is found not to be within the terms of warranty, repairs and carriage charges will be quoted and made accordingly.

This warranty applies in lieu of any other warranty expressed or implied and variations of its terms are not authorised.

Your Draper warranty is not effective unless you can produce upon request a dated receipt or invoice to verify your proof of purchase within the warranty period.

Please note that this warranty is an additional benefit and does not affect your statutory rights.

Draper Tools Limited.

4. INTRODUCTION

4.1 SCOPE

Air powered caulking gun compatible with standard size C3 (215 50mm) cartridges. Ideal for workshop, construction and automotive applications.

4.2 SPECIFICATION

Stock No.	30911
Part No.....	DAT-ACG
Bore Size:.....	50mm
Tube Length:.....	215mm
Operating Air Pressure:.....	90psi (6.2bar)
Average Air Consumption:	170L/min
Minimum Hose Size:.....	3/8" I/D
Air Inlet:.....	1/4" BSP
Weight:.....	0.92kg

4.3 HANDLING AND STORAGE

- Care must be taken when handling this product.
 - Dropping this power tool could have an effect on its accuracy and could also result in personal injury. This product is not a toy and must be respected.
- Environmental conditions can have a detrimental effect on this product if neglected.
 - Exposure to damp air can gradually corrode components. If the product is unprotected from dust and debris, components will become clogged.
 - If not cleaned and maintained correctly or regularly, the machine will not perform at its best.

5. HEALTH AND SAFETY INFORMATION

5.1 GENERAL SAFETY INSTRUCTIONS FOR POWER TOOL USE

When using any type of power tool there are steps that should be taken to make sure that you, as the user, remain safe.

Common sense and a respect for the tool will help reduce the risk of injury.

Read the instruction manual fully. Do not attempt any operation until you have read and understood this manual.

Most important you must know how to safely start and stop this machine, especially in an emergency.

Keep the work area tidy and clean. Attempting to clear clutter from around the machine during use will reduce your concentration. Mess on the floor creates a trip hazard. Any liquid spilt on the floor could result in you slipping.

Find a suitable location. If the machine is bench mounted, the location should provide good natural light or artificial lighting as a replacement. Avoid damp and dust locations as it will have a negative effect on the machine's performance. If the machine is portable do not expose the tool to rain. In all cases do not operate power tools near any flammable materials.

Keep bystanders away. Children, onlookers and passers by must be restricted from entering the work area for their own protection. The barrier must extend a suitable distance from the tool user.

Unplug and house all power tools that are not in use. A power tool should never be left unattended while connected to the power supply. They must be housed in a suitable location, away locked up and from children. This includes battery chargers.

Do not overload or misuse the tool. All tools are designed for a purpose and are limited to what they are capable of doing. Do not attempt to use a power tool (or adapt it in any way) for an application it is not designed for. Select a tool appropriate for the size of the job. Overloading a tool will result in tool failure and user injury. This covers the use of accessories.

Dress properly. Loose clothing, long hair and jewellery are all dangerous because they can become entangled in moving machinery. This can also result in parts of body being pulled into the machine. Clothing should be close fitted, with any long hair tied back and jewellery and neck ties removed. Footwear must be fully enclosed and have a non-slip sole.

Wear personal protective equipment (PPE). Dust, noise, vibration and swarf can all be dangerous if not suitably protected against. If the work involving the power tool creates dust or fumes wear a dust mask. Vibration to the hand, caused by operating some tools for longer periods must be protected against. Wear vibration reducing gloves and allow long breaks between uses. Protect against dust and swarf by wearing approved safety goggles or a face shield. These are some of the more common hazards and preventions, however, always find out what hazards are associated with the machine/work process and wear the most suitable protective equipment available.

Do not breathe contaminated air. If the work creates dust or fumes connect the machine (if possible) to an extraction system either locally or remotely. Working outdoors can also help if possible.

Move the machine as instructed. If the machine is hand held, do not carry it by the power supply cable. If the product is heavy, employ a second or third person to help move it safely or use a mechanical device. Always refer to the instructions for the correct method.

Do not overreach. Extending your body too far can result in a loss of balance and you falling. This could be from a height or onto a machine and will result in injury.

Maintain your tools correctly. A well maintained tool will do the job safely. Replace any damaged or missing parts immediately with original parts from the manufacturer. As applicable, keep blades sharp, moving parts clean, oiled or greased, handles clean, and emergency devices working.

Wait for the machine to stop. Unless the machine is fitted with a safety brake, some parts may continue to move due to momentum. Wait for all parts to stop, then unplug it from the power supply

5. HEALTH AND SAFETY INFORMATION

before making any adjustments, carrying out maintenance operations or just finishing using the tool.

Remove and check setting tools. Some machinery requires the use of additional tools or keys to set, load or adjust the power tool. Before starting the power tool always check to make certain they have been removed and are safely away from the machine.

Prevent unintentional starting. Before plugging any machine in to the power supply, make sure the switch is in the OFF position. If the machine is portable, do not hold the machine near the switch and take care when putting the machine down, that nothing can operate the switch.

Concentrate and stay alert. Distractions are likely to cause an accident. Never operate a power tool if you are under the influence of drugs (prescription or otherwise), including alcohol or if you are feeling tired. Being disorientated will result in an accident.

Have this tool repaired by a qualified person. This tool is designed to conform to the relevant international and local standards and as such should be maintained and repaired by someone qualified, using only original parts supplied by the manufacturer. This will ensure the tool remains safe to use.

5.2 GENERAL SAFETY INSTRUCTIONS FOR COMPRESSED AIR

These safety instructions should be strictly followed. Failure to do so may result in accidents, equipment malfunctioning, serious personal injury and / or loss of life.

Compressed air is a source of considerable energy. When handling products dealing with compressed air, the following precautions must be taken to prevent accidents.

- Ensure that compressed air is not blocked or in contact with any part of your body.
- Before connecting any pneumatic equipment to the compressed air supply, all mounted fittings, piping assemblies and electrical connections should be checked for security. All plastic plugs in the equipment used for protection during shipping should be removed.
- No piping alterations, removal of fittings, repairing of equipment etc. Should be attempted with air supplies connected. Air and electrical supplies must be disconnected before beginning any adjustment, maintenance or dismantling of equipment.
- The maximum allowable operating pressures, temperature, flows etc. must be strictly observed. Failure to do so might result in catastrophic failure of equipment, and result in serious personal injury and / or death. Refer to individual catalogues for this information, and any other operating or application limitations.

Warning:

- **Compatibility of pneumatic equipment**
Ensuring the compatibility of the procured FRL equipment is the responsibility of the person who designs the Pneumatic system and/ or System specifications. This should be based on specifications or after analysis and / or tests to meet specific requirements.
- **Repair and maintenance**
Assembly, handling, or repair of pneumatic systems should be performed by only trained and experienced operators.
- **Safety first**
Do not service machinery/equipment or attempt to remove any component until safety is confirmed.
 - Inspection and maintenance of machinery / equipment should only be performed after confirmation that both compressed air and electrical supply have been positively disconnected and all residual compressed air in the system has been completely exhausted to the atmosphere.
- **Contact the manufacturer if equipment is to be used in any of the following conditions:**
 - Equipment is to be used in conditions beyond the given specifications, or if equipment is to be used outdoors.

5. HEALTH AND SAFETY INFORMATION

- Equipment is to be used in conjunction with atomic energy, railroad, air navigation, automobiles or related vehicles, medical equipment or safety equipment.
- In applications that adversely effect humans, animals, or property requiring special safety analysis.

5.3 ADDITIONAL SAFETY INSTRUCTIONS FOR AIR PRODUCTS

Important: Draper Tools Limited recommends that this machine should not be modified or used for any application other than that for which it was designed. If you are unsure of its relative applications do not hesitate to contact us in writing and we will advise you.

- Always wear safety goggles or glasses.
- Always ensure machine is switched off before connecting to air supply.
- Disconnect any machine from the air supply before changing blades or discs, and before servicing any type of machine.
- Always keep your air tool clean and lubricated. Daily lubrication is essential to avoid internal corrosion and possible failure.
- Do not wear watches, rings bracelets or loose clothing when using air tools.
- Using only light weight coil hoses from a tool to the wall or compressor coupling. Do not fit quick change couplings onto the machine as vibration can cause the coupling to fail.
- Do not overload the machine. Allow the tool to operate at its optimum speed for maximum efficiency.
- Do not increase the air pressure above the manufacturers recommended level, as excessive overload can cause the machine casing to split; also, this creates excessive wear on moving parts and possible failure.
- In the interests of safety and possible damage to the machine/operator, always ensure that the machine has stopped before putting it down after use.
- Always ensure that the workpiece is firmly secured leaving both hands free to control the machine.
- Always ensure that the accessories such as blades, discs, sockets, etc. are rated/designed for use with the machine; as well as correctly and securely fastened before connecting the machine to the air supply.

5.4 RESIDUAL RISK

Important: Although the safety instructions and operating manuals for our tools contain extensive instructions of safe working with power tools, every power tool involves a certain residual risk which can not be completely excluded by safety mechanisms. Power tools must therefore always be operated with caution!

6. TECHNICAL DESCRIPTION

6.1 IDENTIFICATION

- ① Cylinder.
- ② Cylinder cap.
- ③ Air inlet.
- ④ Handle.
- ⑤ Trigger.

7. UNPACKING AND CHECKING

7.1 PACKAGING

Carefully remove the product from the packaging and examine it for any sign of damage that may have happened during shipping. Lay the contents out and check them against the parts shown below. If any part is damaged or missing, please contact the Draper Help Line (the telephone number appears on the Title page) and do not attempt to use the product.

The packaging material should be retained at least during the warranty period, in case the machine needs to be returned for repair.

Warning!

- Some of the packaging materials used may be harmful to children. Do not leave any of these materials in the reach of children.
- If any of the packaging is to be thrown away, make sure they are disposed of correctly, according to local regulations.

7.2 WHAT'S IN THE BOX

As well as the main product, there are several parts not fitted or attached to it.

- ② Cylinder cap.
- ⑦ Air sealing ring.
- ⑧ 1/4" BSP air adaptor.

Note: For details of our full range of accessories and consumables, please visit drapertools.com

8. AIR SUPPLY

8.1 AIR TOOL OIL SPECIFICATION

Failure to follow these instructions will lead to premature malfunction of the equipment which is not covered by the guarantee.

Air tool oil viscosity refers to its properties to flow and how it reacts with heat. A low viscosity is thinner than a high viscosity.

Air tool oil becomes thinner as it heats so choosing the right viscosity is essential. If the viscosity is too low it may provide insufficient lubrication when heated. Equally, if it is too high, the fluid may provide excessive resistance to move through the lines when cold.

The ISO (International Standards Organisation) viscosity grading system measures the kinematic viscosity in centistokes (cSt) at 40° which is today's accepted standard. The SAE (Society of Automotive Engineers) viscosity grade value is based on a scale.

This equipment is suited to an ISO grade 22 – 32 (SAE grade 5W – 15W) monograde oil.

The oil must be constantly supplied to the equipment during use to ensure complete lubrication and optimum performance is achieved. It also acts as a rust inhibitor when the equipment is not in use. We recommend the use of Draper Air Tool Oil.

This air tool operates at a maximum pressure of 90psi and must be controlled via a combination pressure regulator, in-line lubricator and moisture filter such as the Draper range (see your local Draper stockist) which with proper maintenance will ensure a constant supply of dry air and lubricating oil at all times (see illustration below). Always check machine operating pressure before use.

Water in the compressor tank will cause serious corrosion to your air tools and should be drained daily to avoid excessive water in your air supply. Dirty wet air rapidly shortens the life of your air tool.

If you are using an air tool on a hose over 25ft long it is advisable to increase the bore of the hose to the next larger size available, i.e., 1/4" increases 3/8". This will ensure adequate pressure and volume of air to power the machine.

8.2 RECOMMENDED AIR SUPPLY SET UP – FIG. 1

FIG. 1
After each use and before prolonged storage, lubricate the equipment with approximately 1.5ml of air tool oil directly down the air inlet.

9. ASSEMBLY

9.1 CONNECTION TO THE AIR SUPPLY – FIG.2

Whip hose:

To connect the air sander to an air line, a ¼”BSP whip hose will be required.

- Attach the hose via the 1/4” BSP air adaptor (8). The connection must be tight for an airtight union. Wind a length of PTFE tape around the thread before securing in place.

FIG. 2

9.2 INSTALLING CARTRIDGES – FIGS.3 – 5

Warning! Disconnect the air supply before fitting/removing cartridges.

Unscrew and remove the cylinder cap (2).

- Place the cartridge inside the cylinder (1).
- Place the sealing ring (7) over the cartridge.
- Thread the cylinder cap over the cartridge nozzle and screw onto the cylinder.

FIG. 3

FIG. 4

FIG. 5

10. OPERATION AND USE

10.1 OPERATING THE CAULKING GUN – FIG.6

When the cartridge is in place and the gun re-assembled, ensure that any new cartridges have the end of the nozzle cut off, preferably cut at an angle. The angle of cut and the amount trimmed off will be dependant on the requirements of the job in hand.

- Connect and turn on the air supply.
- Press the trigger (5) so that caulking medium is released.
- To stop, release the trigger.
- Note: medium will continue to be released for a slight period after the trigger is released and the pressure drops.

FIG. 6

11. MAINTENANCE AND TROUBLESHOOTING

11.1 EVERY-DAY MAINTENANCE CHECKS

Before connection to the air supply:

- Drain the compressor reservoir of condensate.
- Drain the air lines of condensate.
- Drain the combined separator filter, regulator, water trap.
- Fill up the combined separator filter, regulator, lubricant reservoir.
- Check the line pressure is correct for the tool.

11.2 AFTER USE MAINTENANCE CHECKS

- Repeat the above procedures.
- Lubricate the tool with approximately 1.5ml of oil directly down the air inlet.

11.3 TROUBLESHOOTING GUIDE

Problem	Possible Cause	Remedy
Tool runs at normal speed but loses power under load	Motor parts worn.	Lubrication of clutch housing.
	Cam clutch worn or sticking due to a lack of lubricant.	Check for excess clutch oil. Clutch cases need only be half full. Overfilling can cause drag on high-speed clutch parts, ie. a typical oiled/lubricated wrench requires 1/2 ounce of oil. Note: Heat usually indicates insufficient grease in chamber. Severe operating conditions may require more frequent lubrication.

11. MAINTENANCE AND TROUBLESHOOTING

11.3 TROUBLESHOOTING GUIDE

Problem	Possible Cause	Remedy
Tool runs slowly. Air flows freely from exhaust.	Motor parts jammed with dirt particles.	Check air inlet filter for blockage.
	Power regulator in closed position.	Pour air tool lubricating oil into air inlet.
	Air flow blocked by dirt	Operate tool in short bursts, quickly reversing rotation back and forth where applicable. Repeat the above as needed. If this fails, return to service centre.
Tools will not run. Air flows freely from exhaust.	One or more motor vanes stuck due to material build up.	Pour air tool lubricating oil into air inlet. Operate tool in short bursts, quickly reversing rotation back and forth where applicable. Tap motor housing gently with a plastic mallet. Disconnect supply. Free motor by rotating drive shank manually where applicable. If tool remains jammed, return to service centre.
Tool will not shut off.	'O' rings throttle valve dislodged from seat inlet valve.	Replace 'O' ring or return to service centre.

We recommend the use of Draper Air Tool Oil:

12. DISPOSAL

12.1 DISPOSAL

- At the end of the machine's working life, or when it can no longer be repaired, ensure that it is disposed of according to national regulations.
- Contact your local authority for details of collection schemes in your area.

13. EXPLANATION OF SYMBOLS

13.1 EXPLANATION OF SYMBOLS

Read the instruction manual.

Wear face mask and safety glasses.

Wear protective gloves.

Do not abandon into the environment.

Warning!

Continuous A-Weighted Sound Pressure Level.
